Please use Slack for technical help. Please monitor Slack so that you might help your classmates if needed.

Your assignment is to complete the Docker getting started tutorial, found here: **https://docs.docker.com/get-started/** ⤢ **(https://docs.docker.com/get-started/)** . This tutorial includes installing Docker Desktop, running and modifying a sample application, sharing it, persisting its data, and improving it to a multi-container application. The minimum requirement is to complete Parts 1-4 (sharing a simple modification). The ideal requirement is to complete Parts 1-8 (the rest). Installing Docker Desktop on Windows requires some initial setup, specifically WSL2 (Windows Subsystem for Linux), so be sure to save time for that if you're using Windows.

By the deadline, submit a document (DOCX or PDF) with a summary of your progress (1-2 paragraphs), and a couple screen shots verifying that progress. If you do not complete all 8 parts, you are encouraged to keep making progress after the due date.

Points	50
Submitting	a file upload
File Types	docx and pdf

Due	For	Available from	Until
