HW2: Mess Around with GitLab

✅ **Published**   ✎ **Edit**   ⋮

Your citadel.edu email address was invited to join the CitadelCS group on GitLab. Please accept the invite and create an account. I am unable to invite any address other than citadel.edu. If you do not regularly check your citadel.edu account, please ensure that it forwards to somewhere you do.

Part 1. Take a look around GitLab, especially the two projects you should be able to see. Don't break anything please.

Part 2. Submit a (trivial) merge request for the wordguesser app. This should involve the following steps:

1. Clone the repository to your local (possibly virtual) machine. Wherever you completed the Docker tutorial should suffice.
2. Create a branch with your name and make some nonthreatening modifications. Suggestions: readme file, new text file, etc.
3. Push your *branch* to the gitlab repo: git push origin *your-branch*
4. Visit the merge request section, find your pushed branch, and open (and document) a merge request.
5. This should trigger the CI/CD pipeline (except deploy). Make sure all stages pass. If not, make changes and re-push your branch.
6. Do not merge your branch into main. Leave the merge request open for my review.

Please use slack for questions/issues. This is my first rodeo with a group GitLab assignment, so please be patient, flexible. Please have made some progress before class on Tuesday.

Submit a link to your merge request.
